Centrobolus silvanus dimorphism based on tergite width

Published On: November 15, 2018 | Pages: 003 - 005

Author(s): Mark Cooper*

The forest genus *Centrobolus* of diplopoda belonging to the Order Spirobolida is distributed along the eastern coast of southern Africa. Sexual size dimorphism (SSD) can be explained as sexual selection and fecundity selection. Width and length were analysed in *Centrobolus* to derive SSD in 22 species. Width size of *C. silvanus* collected in South Africa was calculated a ...
